Source-backed grouped formula sample

1 Expressions

Expression 1. The following expression is taken from a source-backed formula corpus.

$$= \int dt d\theta d\phi dt' d\theta' d\phi' \frac{\sin \theta \sin \theta' \Phi_-(t, \theta, \phi) \Phi_-(t', \theta', \phi')}{[\cosh(\frac{t-t'}{a}) - (\sin \theta \sin \theta' \cos(\phi - \phi') + \cos \theta \cos \theta')]^h}.$$

Expression 2. The following expression is taken from a source-backed formula corpus.

$$\left(V(\psi \otimes \bar{w}, z) \left(|\chi\rangle_l \otimes |\bar{u}\rangle_l \right) \right)_m := \lim_{\bar{z} \rightarrow 0} \bar{z}^{\bar{\Delta}_j + \bar{\Delta}_l - \bar{\Delta}_m} \left(\phi(\psi \otimes \bar{w}; z, \bar{z}) \left(|\chi\rangle_l \otimes |\bar{u}\rangle_l \right) \right)_m,$$

Expression 3. The following expression is taken from a source-backed formula corpus.

$$\gamma^{-1/2} e^{\phi} \left[\frac{\delta \mathcal{S}}{\delta \gamma_{ij}} \frac{\delta \mathcal{S}}{\delta \gamma_{kl}} \gamma_{ik} \gamma_{jl} + \frac{1}{2} \left(\frac{\delta \mathcal{S}}{\delta \phi} \right)^2 + \gamma_{ij} \frac{\delta \mathcal{S}}{\delta \gamma_{ij}} \frac{\delta \mathcal{S}}{\delta \phi} \right] = 0 \quad .$$

Expression 4. The following expression is taken from a source-backed formula corpus.

$$+ \frac{1}{2} G_{ij} G^{\alpha\beta} \partial_\alpha \Phi^i \partial_\beta \Phi^j \Big\} \left(1 + \frac{\tilde{b}}{2\pi^2 \alpha'} \right) + \frac{1}{8\pi g_s} \int d^4 x \frac{1}{4} F_{\alpha\beta} \tilde{F}^{\alpha\beta} \left(\frac{c + C_0 b}{2\pi^2 \alpha'} \right) \quad .$$

Expression 5. The following expression is taken from a source-backed formula corpus.

$$\Delta_{\varepsilon,\bar{\varepsilon}}^{(1)} = \frac{\sigma^2}{2} \cdot \frac{m - i\varepsilon\widehat{p}}{2m} \cdot \frac{m - i\bar{\varepsilon}\overline{p}}{2m} \cdot (1 - \sigma_p^2) = \Psi_{\varepsilon,\bar{\varepsilon}} \cdot \overline{\Psi}_{\varepsilon,\bar{\varepsilon}}$$
