

This is a sample document testing the accsupp option. If your PDF viewer doesn't provide a text-to-speech facility try copying the text on this page and pasting to a text file to see the difference.

1 An Abbreviation

First use: specific learning difference (SpLD). Next use: SpLD.

Access name: specific learning difference.

Access text: specific learning difference.

Access short: specific learning difference.

If the access field isn't set in the above, no replacement text is used in the corresponding `\glstext`, `\glsaccessstext` etc commands.

Text field: SpLD [no-index/link version: SpLD]. Short field: SpLD [no-index/link version: SpLD].

2 An Initialism

The short form should be read as two letters: P I (not as the word pi).

First use: Private Investigator (PI). Next use: PI.

Access short: Private Investigator. Actual short value: PI. Access (name): Private Investigator.

3 A Symbol

First use: $\Re$. Next use: $\Re$. Text field: $\Re$. Name field: $\Re$.

First use: $\in$. Next use: $\in$. Text field: $\in$. Name field: $\in$.

Now test in math-mode:

$$x \in \Re$$

The “firstaccess” field is used on first use. If this hasn't been set the “access” field is used instead. The “textaccess” field is used on subsequent use. If this hasn't been set the “access” field is used instead. The “access” field is used for the entry name in the glossary list.

Access (name) field: set of real numbers symbol. First Access field: set of real numbers symbol. Text Access field: set of real numbers.

Access (name) field: is element of set symbol. First Access field: is element of set symbol. Text Access field: in.

Glossary

This document is incomplete. The external file associated with the glossary ‘main’ (which should be called `sample-accsupp.gls`) hasn't been created.

Check the contents of the file `sample-accsupp.gls`. If it's empty, that means you haven't indexed any of your entries in this glossary (using commands like

`\gls` or `\glsadd`) so this list can't be generated. If the file isn't empty, the document build process hasn't been completed.

If you don't want this glossary, add `nomain` to your package option list when you load `glossaries-extra.sty`. For example:

```
\usepackage[nomain]{glossaries-extra}
```

Try one of the following:

- Add `automake` to your package option list when you load `glossaries-extra.sty`. For example:

```
\usepackage[automake]{glossaries-extra}
```

- Run the external (Lua) application:
`makeglossaries-lite.lua "sample-accsupp"`
- Run the external (Perl) application:
`makeglossaries "sample-accsupp"`

Then rerun $\text{\LaTeX}$ on this document.

This message will be removed once the problem has been fixed.
