

Introduction

This document is intended to check the support of the package option `handout`. With this option, the PDF file is clean from teacher-only information (answers, points, penalty, feedback, tags) and, hence, can be given to students for class-room work. In particular, as would Moodle do, answers in `matching` questions are shuffled and the option `shuffle` triggers the shuffling of choices offered (`multi` and `matching`). The XML file is generated as usual.
