1 Extracted Lists

The list environments below are extracted from arXiv LaTeX source and wrapped for pdfLaTeX validation.

1. For each ramification index, there are two possible values for α_1 .
2. When $\alpha_1 = -1$, although the DS operator has apparent singularity at $z = 0$, corresponding solution is perfectly regular.
3. When $\alpha_1 = -1/2$, the monodromy matrix is not diagonalizable, and this case is not covered by the present analysis. This is the so-called parabolic case.
