

Supersymmetric Construction of W-Algebras from Super Toda and Wznw Theories

Source-backed arXiv sample

1 Extracted Lists

The list environments below are extracted from arXiv LaTeX source and wrapped for pdfLaTeX validation.

1. The adjoint representation of $\mathcal{G}_0$ decomposes into rank $\mathcal{G}$ multiplets of the subalgebra $\mathcal{S}$ (??).
2. The representation of $\mathcal{G}_0$ in $\mathcal{G}_1$ also decomposes into rank $\mathcal{G}$ $\mathcal{S}$ -multiplets.
3. After the gauge fixing there is a one to one correspondence between remaining currents and $\mathcal{S}$ -multiplets in the adjoint of $\mathcal{G}$.
4. The number of remaining currents with integer and half integer height is the same and equal to the rank of $\mathcal{G}$.
5. The conformal spin, w.r.t. $L(x)$, of the remaining current associated to the $\mathcal{S}$ -multiplet with highest weight j is $(j + 1)$.
