

The Hausdorff dimension of the boundary of the Mandelbrot set and Julia sets

Source-backed arXiv sample

1 Figure Captions

Figure 1: Figure 5} Gluing these two curves of S_0^- (resp. S_0^+), one obtains a topological cylinder $\mathcal{C}_0^-$ (resp. $\mathcal{C}_0^+$), called the $\{$ it outgoing

Figure 2: Figure 7} Now let us consider the following sequence of maps: $\{U_i\}_{i \geq 0}$

Figure 3: Figure 8} To analyze the bifurcation, we need to consider q incoming and q outgoing Ecal cylinders $\mathcal{C}_0^{k,+}$

Figures 1 through 3 preserve source-backed captions while replacing external graphics with deterministic placeholders.
