

# Non-Perturbative 2D Quantum Gravity, Again

Source-backed arXiv sample

## Abstract

This is a talk given by S.D. at the the workshop on Random Surfaces and 2D Quantum Gravity, Barcelona 10-14 June 1991. It is an updated review of recent work done by the authors on a proposal for non-perturbatively stable 2D quantum gravity coupled to  $c < 1$  matter, based on the flows of the (generalised) KdV hierarchy.

## 1 References And Citations

This sample cites source keys [1] and [2]. Section 1 and Equation 1 provide cross-reference coverage.

$$a^2 + b^2 = c^2 \tag{1}$$
